

REENGINEERING A GLOBAL SUPPLY CHAIN AND WAREHOUSE DISTRIBUTION SYSTEM

PROGRAM EXECUTION PRACTICE

ERP IMPLEMENTATION

Trexin specializes in leading our customers through challenging transitions, and nothing is more challenging yet potentially transformative than an ERP implementation.

Trexin's approach to ERP implementations is based on direct experience that sound management of technology and organization change management is a critical success factor for ERP implementations. Emphasizing risk management, program management, and organizational change techniques, our ERP implementation services include:

- ERP Program Mgmt.
- ERP Architecture/Design
- ERP Systems Integration
- ERP Reengineering

Trexin partnered with a Fortune 500 manufacturing company to completely reengineer its supply chain management and warehouse distribution systems.

BUSINESS DRIVER

Driven by acquisitions demanding flexibility to support varying organizational structures and business processes, the client's CIO asked Trexin to help create an integrated global supply chain and warehouse distribution system to consolidate/retire multiple legacy systems, incorporate new business requirements & value-added services, and close gaps in core system functionality.

ANALYSIS & TEAMWORK

Trexin worked closely with the client's teams to:

- Define a project structure with communication between the leadership in program development, business units, geographies, and executives
- Provide due diligence for 3rd party application software that had been selected by the client
- Manage quality through a continuous technical and functional testing program
- Lead designs for a scalable global business, including integration and messaging architecture to support system performance needs and integration with legacy systems
- Identify risk mitigation and implementation strategies for continuity of core operations at the warehouses, including development of conversion processes, tools, and programs

RESULTS

- Results to date: Reengineered the 3rd party software to meet global architecture standards; completed and certified the software architecture foundation to ensure the global architecture will be scalable and meet/exceed online performance guidelines.
- Completed: Business designs to address business functional gaps; defined the initial conversion and rollout strategy.
- Still in Progress: Completing the coding & testing of the new business functions and the conversion plans for a global rollout; finalizing the approach for change management.
- Upon completion, results will be: An integrated system to allow warehouse operations to reduce costs and improve accuracy within the order life cycle; a single centralized warehouse management system operating over 200+ global warehouses on the same platform; mobile computing to improve accuracy & efficiency for warehouse operations.

"The only thing we have to fear is fear itself."
