DRUG DIVERSION PREVENTION

Is Your Healthcare System at **RISK?**

10-15% OF NURSES have been or are addicted to drugs obtained from their workplace

In 2019, **148M DOSES WERE LOST**

Drug diversion can pose major **health and safety concerns** for patients and care workers alike

It is a **consequential** problem in our healthcare organizations

All roles from physician to cleaning staff are impacted by it

The **EPA, DEA, and CMS** are all getting involved to combat this growing problem

TREXIN CAN HELP YOU THROUGHOUT YOUR OPTIMIZATION JOURNEY.

DRUG DIVERSION
Monitoring Maturity Scale

PROGRESSING TOWARDS OPTIMIZATION

DOES NOT EXIST
- No process, polices, and management in place
- No systems

ADHOC
- Process, policies, and management are developing
- Manual approach to monitoring

COMMITTED
- Limited process, policies, and management, but not an organizational priority
- Limited system data available, (PDF and outdated)

FORMAL
- Formalized process, policies, and management
- Separate data being pulled from multiple sources

MANAGED
- Drug diversion department established who owns process, policies, and management
- Limited integration of systems data

OPTIMIZED
- Drug diversion department fully supported by organization. Process and policies are regularly updated with education tools in place
- Proactively using a state-of-the-art monitoring system on a daily basis
